The Biocodex Microbiota Institute is an international hub of knowledge dedicated to microbiota. The Institute educates the lay public and healthcare professionals on the importance of microbiota on healthcare and well-being.

The Biocodex Microbiota Foundation promotes scientific discovery in microbiota by funding academic research and rewarding innovative projects which are likely to improve public health.
an international hub of knowledge dedicated to microbiota

Dysbiosis of the gut microbiota and autism: the role of diet unveiled

LP

The bacterial troops of the intestinal and pulmonary regiments unite in the fight against tuberculosis

WHAT YOU NEED TO KNOW ABOUT THE 6 MICROBIOTA OF THE HUMAN BODY

The power of your gut
You probably already know it, a balanced intestinal microbiota is good for your health. But, its role is not limited to the gut. Discover all the impacts that the intestinal microbiota can have!

Find out more

My microbiota as a woman
From puberty to menopause, through pregnancy and childbirth, women’s lives are marked by major events during which their microbiota play a major role.

Find out more

Our marvelous microbiota
Skin microbiota, ENT microbiota, lung microbiota or urinary microbiota... What are the roles of microorganisms, true partners of our health throughout our lives?

Find out more

One news about microbiota each week, videos, infographics, quiz...

The Institute has been recognized by peers and international medical societies such as the World Gastroenterology Organization

Since 2017, the Biocodex Microbiota Foundation rewards international research projects focused on human gut microbiota related to health and disease. Every year, the call for projects covers a specific theme chosen by a committee of independent international scientists.

The annual call for proposals is carried out in countries where Biocodex has a subsidiary presence. An independent local scientific committee – made up of scientists recognized for their expertise in the microbiota field – gathers all proposals and selects the winning project to be granted.

To foster its commitment to improving health worldwide, the Biocodex Microbiota Foundation has launched in 2021 the Henri Boulard Award, a grant that rewards innovative projects which are likely to provide an improvement to public health in pathological conditions linked to the human intestinal microbiota imbalance. Every year, the best 3 projects will each be awarded €10,000.
